Travel	**(£353.50)**
Entertainment & Hospitality	**(£219.39)**
Total Expenses	**(£62,925.08)**

Net Loss	**£46,225.08**

Overview

On a cash basis the period shows a deficit, driven largely by the HMRC settlements for the previous period and a full quarter of payroll against a single client settlement. The revolving credit drawdown and the loan instalment sit on the balance sheet under the loan account and are outside this statement.

Income Commentary

Sales come from one client settlement and other revenue from a grant, so the income line is lumpy by construction. Neither item recurs on a monthly cycle.

Expense Commentary

Wages and the employer NIC and PAYE settlements dominate, followed by legal, accountancy and audit fees that are seasonal. Software, insurance, premises and travel make up a stable base. Two payments coded to general expenses and one contractor invoice await reviewer confirmation.

Outlook

The next quarter should carry lower professional fees and no audit charge. The main risks are the timing of client receipts against fixed payroll and HMRC dates, and the repayment profile of the facility. A monthly billing rhythm would remove most of the volatility seen here.
